Online interview

Friendly offer

Addepto is a leading consulting and technology company specializing in AI and Big Data, helping clients deliver innovative data projects. We partner with top-tier global enterprises and pioneering startups, including Rolls Royce, Continental, Porsche, ABB, and WGU. Our exclusive focus on AI and Big Data has earned us recognition by [Forbes](#) as one of the top 10 AI consulting companies.

As a **Senior Data Engineer**, you will have the exciting opportunity to work with a team of technology experts on challenging projects across various industries, leveraging cutting-edge technologies. Here are some of the projects we are seeking talented individuals to join:

- **Design and development of a universal data platform for global aerospace companies.** This Azure and Databricks powered initiative combines diverse enterprise and public data sources. The data platform is at the early stages of the development, covering design of architecture and processes as well as giving freedom for technology selection.
- **Data Platform Transformation for energy management association body.** This project addressed critical data management challenges, boosting user adoption, performance, and data integrity. The team is implementing a comprehensive data catalog, leveraging Databricks and Apache Spark/PySpark, for simplified data access and governance. Secure integration solutions and enhanced data quality monitoring, utilizing Delta Live Table tests, established trust in the platform. The intermediate result is a user-friendly, secure, and data-driven platform, serving as a basis for further development of ML components.
- **Design of the data transformation and following data ops pipelines for global car manufacturer.** This project aims to build a data processing system for both real-time streaming and batch data. We'll handle data for business uses like process monitoring, analysis, and reporting, while also exploring LLMs for chatbots and data analysis. Key tasks include data cleaning, normalization, and optimizing the data model for performance and accuracy.

Your main responsibilities:

- Design and optimize scalable data processing pipelines for both streaming and batch workloads using Big Data technologies such as Databricks, Apache Airflow, and Dagster.
- Architect and implement end-to-end data platforms, ensuring high availability, performance, and reliability.
- Lead the development of CI/CD and MLOps processes to automate deployments, monitoring, and model lifecycle management.
- Develop and maintain applications for aggregating, processing, and analyzing data from diverse sources, ensuring efficiency and scalability.
- Collaborate with Data Science teams on Machine Learning projects, including text/image analysis, feature engineering, and predictive model deployment.
- Design and manage complex data transformations using Databricks, DBT, and Apache Airflow, ensuring data integrity and consistency.
- Translate business requirements into scalable and efficient technical solutions while ensuring optimal performance and data quality.
- Ensure data security, compliance, and governance best practices are followed across all data pipelines.

What you'll need to succeed in this role:

Senior Data Engineer (Databricks)

- Strong **SQL** skills, including performance tuning, query optimization, and experience with **data warehousing solutions**.
- Experience in designing and implementing data governance and data management processes.
- Deep expertise in Big Data technologies, including **Apache Airflow, Dagster, Databricks**, and other modern data orchestration and transformation tools.
- Experience implementing and deploying solutions in cloud environments (with a preference for **Azure**).
- Knowledge of how to build and deploy Power BI reports and dashboards for data visualization.
- Excellent understanding of dimensional data and data modeling techniques.
- Consulting experience and the ability to guide clients through architectural decisions, technology selection, and best practices.
- Ability to work independently and take ownership of project deliverables.
- Familiarity with **Spark, Azure Event Hub** or **Kafka**.
- Master's or Ph.D. in Computer Science, Big Data, Mathematics, Physics, or a related field.

Discover our perks & benefits:

- Work in a supportive team of passionate enthusiasts of AI & Big Data.
- Engage with top-tier global enterprises and cutting-edge startups on international projects.
- Enjoy flexible work arrangements, allowing you to **work remotely** or from modern offices and coworking spaces.
- Accelerate your professional growth through **career paths, knowledge-sharing** initiatives, **language** classes, and sponsored **training** or **conferences**, including a partnership with **Databricks**, which offers industry-leading training materials and certifications.
- Choose from various employment options: B2B, employment contracts, or contracts of mandate.
- Make use of 20 fully paid days off available for B2B contractors and individuals under contracts of mandate.
- Participate in **team-building events** and utilize the **integration budget**.
- Celebrate **work anniversaries, birthdays, and milestones**.
- Access **medical** and **sports packages**, eye care, and well-being support services, including psychotherapy and coaching.
- Get full work equipment for optimal productivity, including a laptop and other necessary devices.
- With our backing, you can **boost your personal brand** by speaking at conferences, writing for our blog, or participating in meetups.
- Experience a smooth onboarding with a dedicated buddy, and start your journey in our friendly, supportive, and autonomous culture.
